Vacancy details

We are looking for a responsible Elixir developer who will help us build internet inventory, robust APIs, and Data Services for security teams. Your primary focus will be the development of server-side logic, integration with different data sources, and with front-end applications.

Requirements: proficient in Elixir or Erlang and 5+ years of experience in general backend development; relational, key-value, and document-based data storage; proficient in communicating with ElasticSearch or similar data stores; performance optimization and application monitoring; test-driven development experience.

Nice to have: understanding front-end technologies and platforms; building and maintaining CI/CD pipelines; passion for new technologies and software development best practices other language experiences such as Python, GoLang, Scala; working in an agile-based workflow utilizing tools such as JIRA, Confluence and others.

Your tasks: drive features implementation from end-to-end; integrate with heterogeneous data sources and different 3rd-party data services; deliver high-quality and maintainable code with reliable test coverage.

We guarantee: career growth and learning opportunities; timely payment of salary according to the contract; corporate events.
